CUTTING-EDGE FPD TECHNOLOGY

The "all-in-one" R/F multifunctional remote-controlled system conceived for the best combination with flat panel detectors.

A unique highly integrated solution to manage examinations in both digital radiography and fluoroscopy.

Thanks to its cutting-edge technology and innovatory concept, OPERA Swing provides enhanced examinations in any diagnostic procedure.

OPERATIONAL EFFECTIVENESS

User-friendliness and operational efficiency for advanced diagnostic imaging: skeletal system, thorax, lungs, gastroenterology, gynaecology, paediatrics, emergency, digital angiography, tomography, tomosynthesis, stitching.

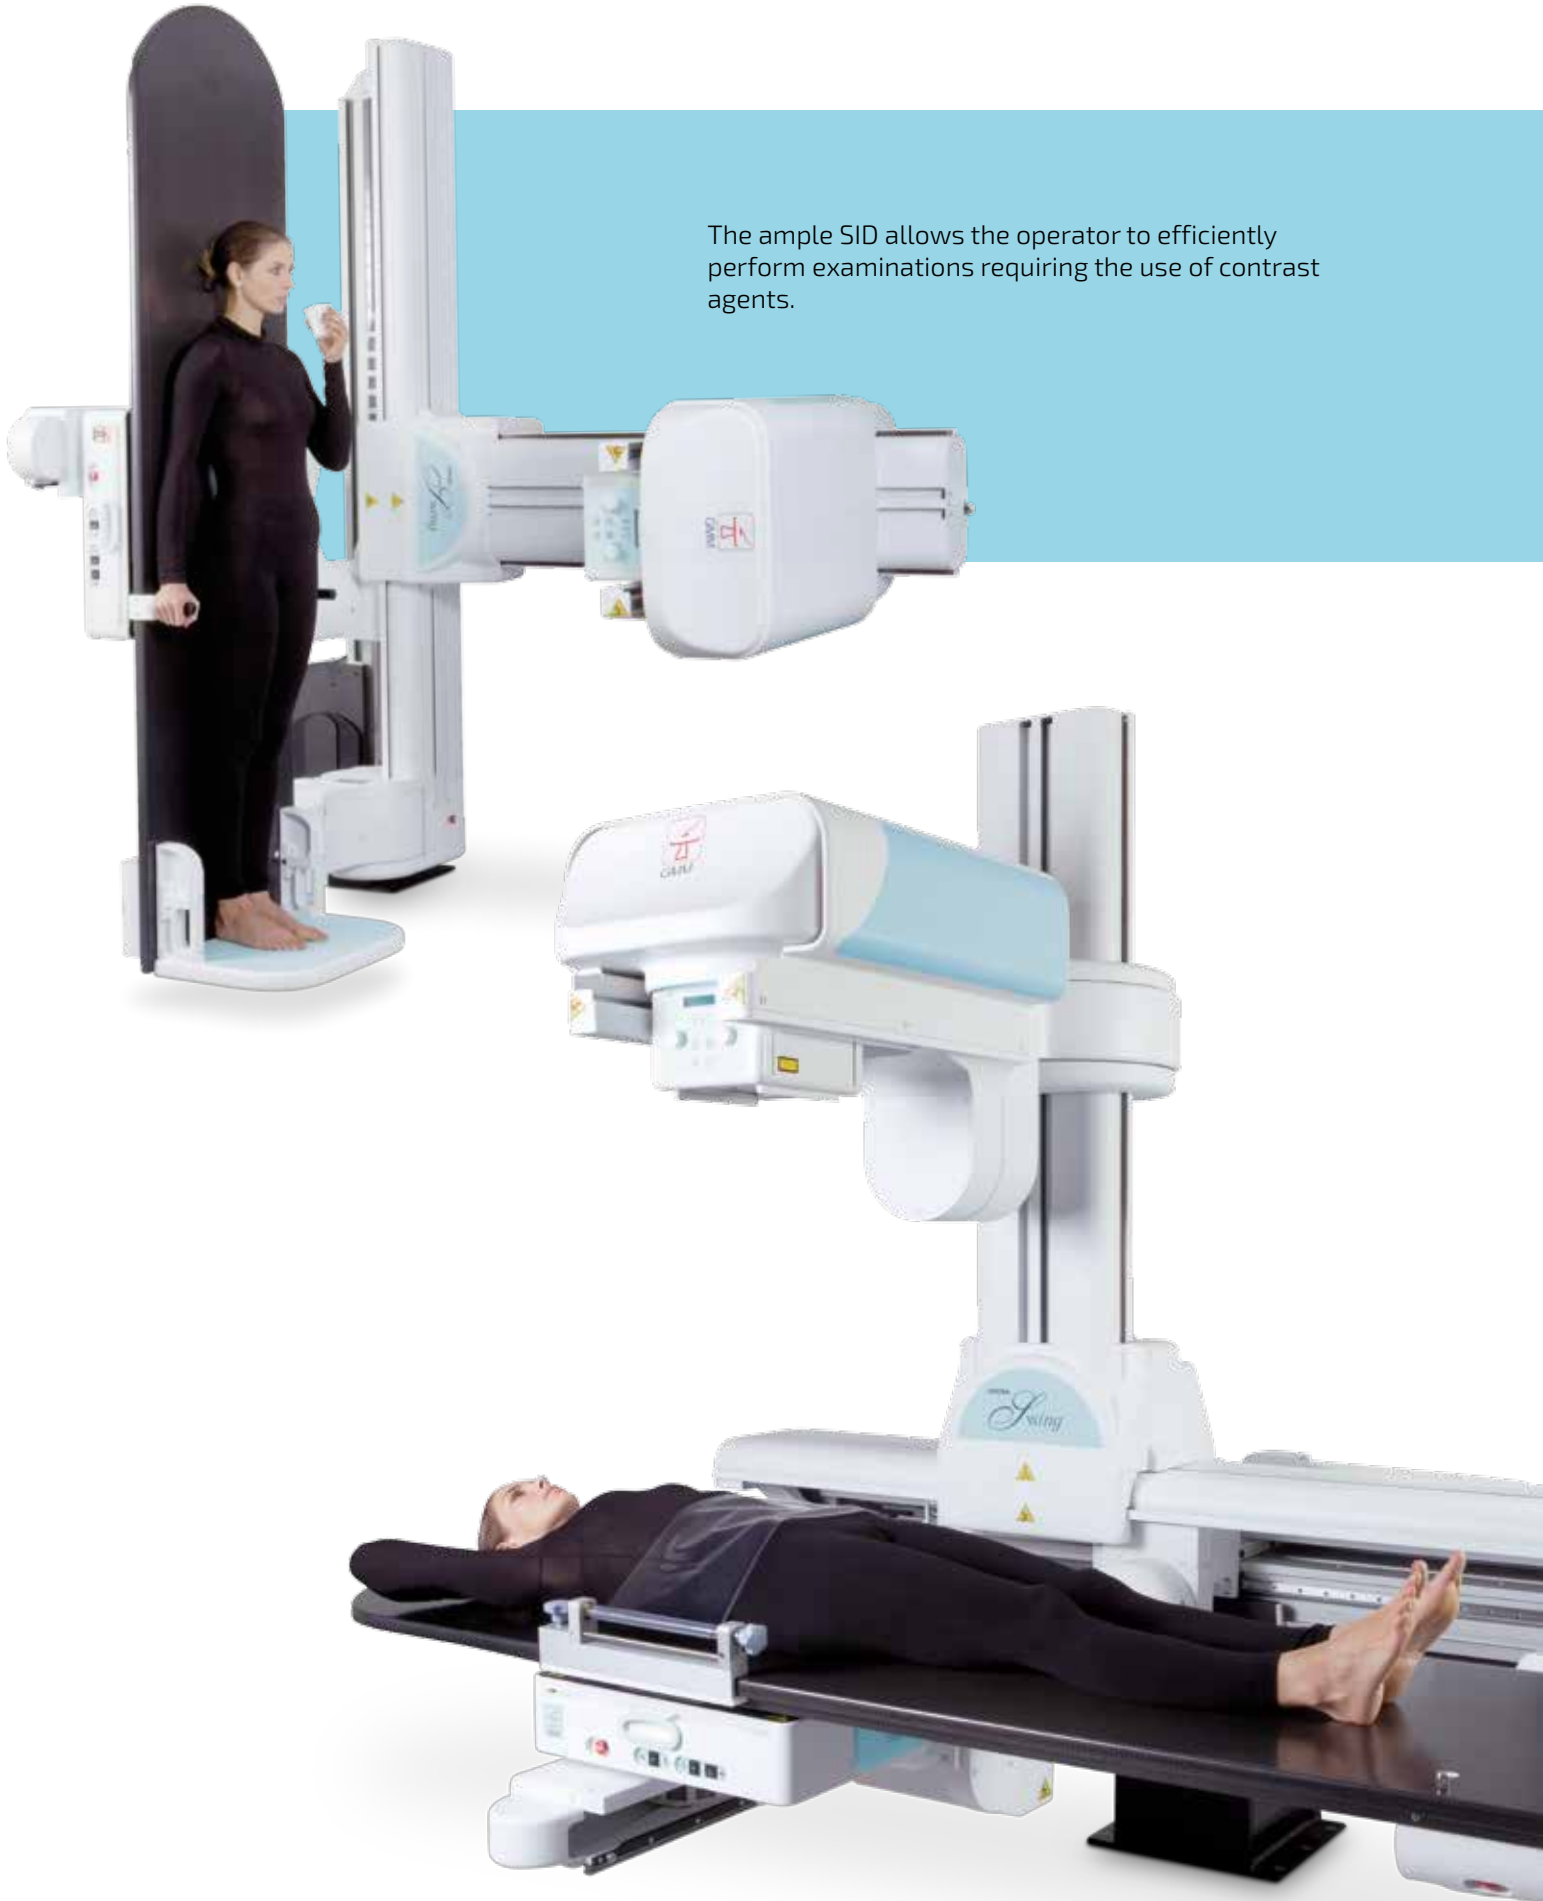

USER-FRIENDLINESS

The +/- 90° tilting movement ensures the safe and easy execution of routine and specialized examinations, as well as tomographic procedures and stitching with the patient in the clinostatic and orthostatic position.

The ample SID allows the operator to efficiently perform examinations requiring the use of contrast agents.

ACCURATE PROJECTIONS

The system fully automated and programmed movements provide the safest and most accurate execution of unique projections, even on elderly patients or patients with limited mobility.

LATERAL PROJECTIONS

TRANSVERSAL OBLIQUE PROJECTIONS

SPECIAL PROJECTIONS

SPECIAL PROJECTIONS
ON STRETCHER

PROJECTIONS IN DIRECT
CONTACT WITH THE DETECTOR

EXAMINATIONS OF THE UPPER
AND LOWER LIMBS

EXAMINATIONS
OF THE THORAX AND COLUMN

AP AND LATERAL PROJECTIONS ON STRETCHER

MINIMUM PATIENT DOSE

OPERA Swing is ideally suited for paediatrics procedures thanks to the minimum dose delivered to patients and the possibility to further reduce dose levels while operating, without grid, in direct contact with the detector.

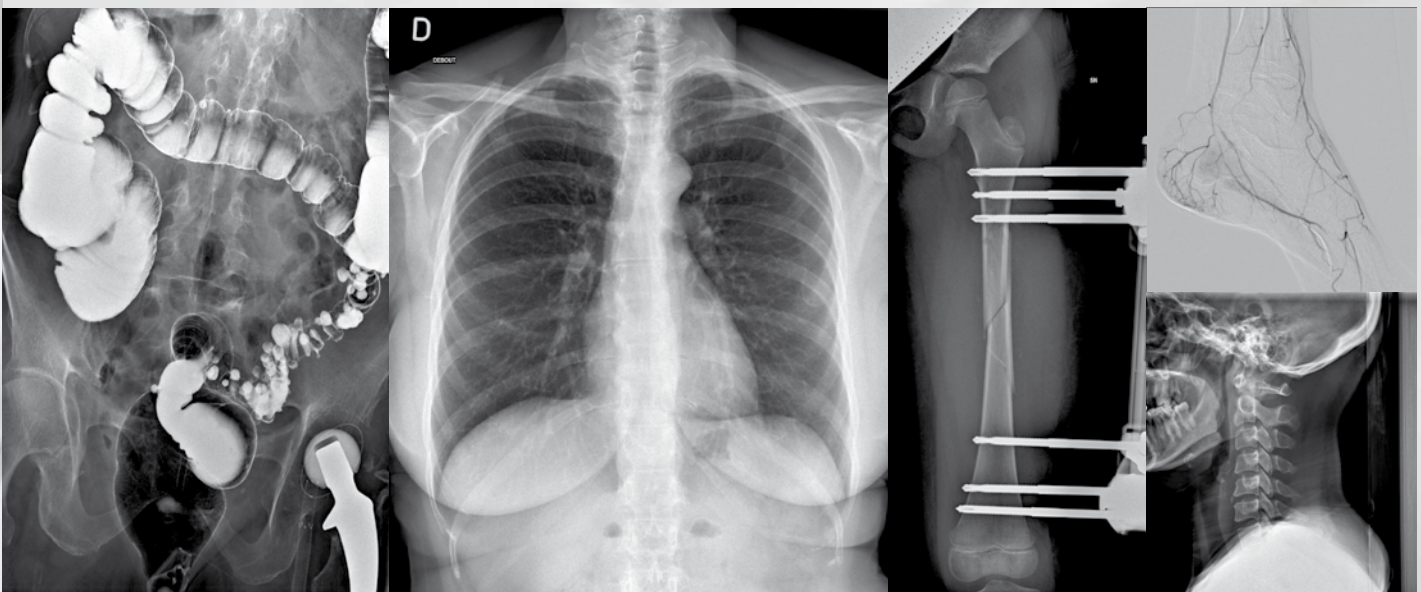

INTUITIVE CONTROL CONSOLE

OPERA Swing is managed by an advanced control console: intelligent and user-friendly, it ensures the best combination of the generator and digital system controls.

OPERA SWING, ALL-IN-ONE

Gastroenterology
Musculoskeletal system
Thorax and lungs
Emergency and Traumatology
Paediatrics
Tomography
Tomosynthesis
Digital angiography
Stitching of the column and lower limbs
