REDEFINING THE WAY YOU SEE **DeepInsight™ Technology**

Fujifilm Healthcare has been at the forefront of technology and product developments throughout their history and since the birth of diagnostic ultrasound imaging. Fujifilm Healthcare's vision for the future of ultrasound is the DeepInsight™ Technology. It represents our confidence in delivering outstanding image quality and the commitment to continue to innovate in order to reach the highest imaging standards. Fujifilm Healthcare also believes that innovative concepts are required to foster premium ultrasound imaging.

ARIETTA™ 850 DEEPINSIGHT™ ULTRASOUND SYSTEM REDEFINING THE WAY YOU SEE

SENSE AND VISUALIZE ULTRASOUND

The new reality of ultrasound imaging
deepening diagnosis

DEEPINSIGHT™ TECHNOLOGY Powered by REiLI

DeepInsight™ technology utilizes an Artificial Intelligence (AI) technology which only extracts the necessary information to provide an unprecedented, highly accurate image quality.

eFOCUSING PLUS

Combined with the new **eFocusing Plus** technology, the **ARIETTA™ 850 DeepInsight™ ultrasound system** achieves new levels of sensitivity, penetration, contrast and spatial resolution.

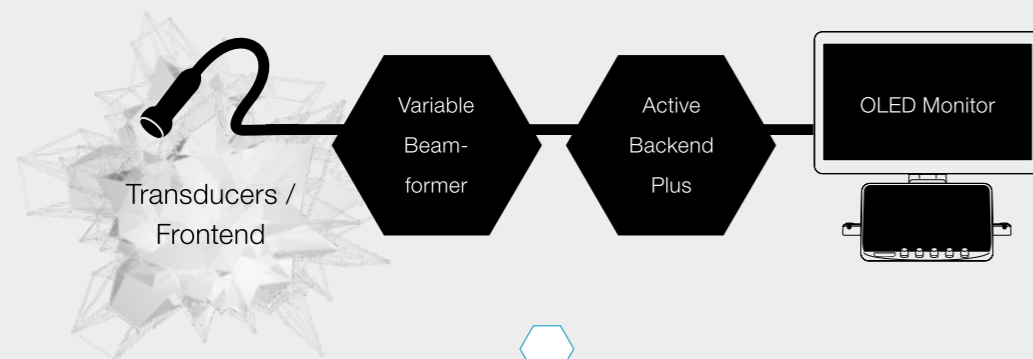

CARVING IMAGING

Additionally, the advanced image processing technology **Carving Imaging** delivers imaging results with less patient dependency.

PURE IMAGE

Further refinement of technologies harnessing high quality “sound” gives rise to our highest premium class performance yet.

PURE SYMPHONIC ARCHITECTURE

SEAMLESS WORKFLOW

Designed with sophisticated ergonomics and multiple new tools that streamline your workflow.

YOUR APPLICATION

An extensive variety of unique applications that deliver new clinical value are accessible across all specialties.

YOUR ULTRASOUND PREMIUM SYSTEM

The ARIETTA™ 850 DeepInsight™ Ultrasound System has unique and advanced applications that quickly provide diagnostic information keeping it one step ahead of the market

Liver disease
assessment
solutions

Powerful technologies for confident evaluation of diffuse liver diseases such as steatosis and fibrosis.

Interventional
Radiology
Solutions

Real-time comparison between ultrasound and other imaging modalities for safer and more accurate interventional procedures.

Cardiology
solutions

Unique analytics package, for cardiac assessments in daily practice.

Obstetrics
solutions

Advanced technologies from early diagnosis, to follow-up and detection of fetal and women's health.

YOUR ULTRASOUND PREMIUM SYSTEM

Vascular solutions

Early detection of lesions by depicting tumor vascularisation or vessel blood flow with an expert colour mode.

Women's Health solutions

Spotting and characterising tissue abnormalities at an early stage for confident diagnosis and guidance during breast biopsy.

Surgery solutions

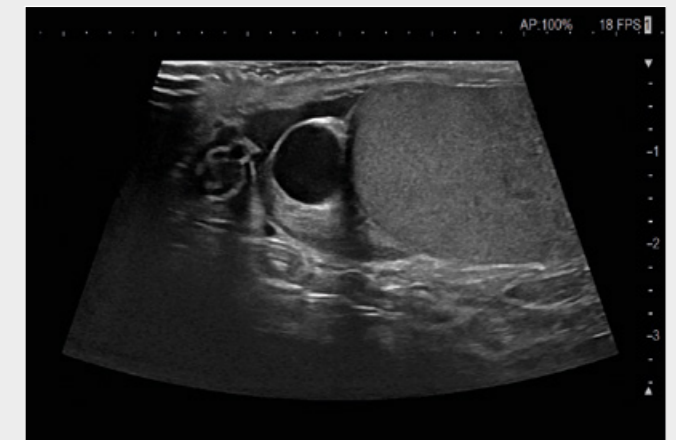

Combining highest image quality with dedicated intraoperative probes and imaging features for reliable guidance.

Urology solutions

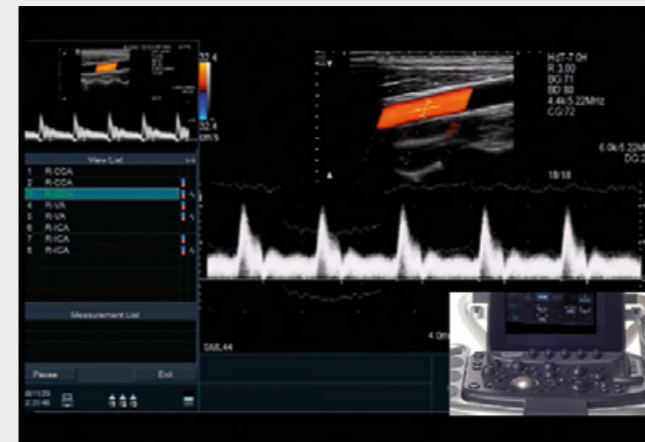

Confident urinary examinations, prostate biopsies and minimally invasive procedures for safer diagnosis, treatment and follow-up.

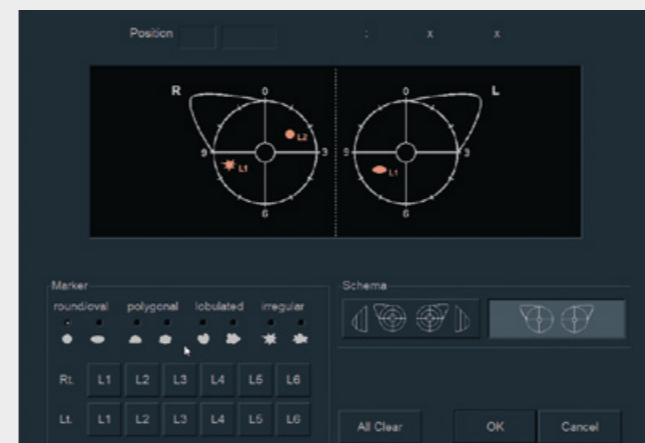

SEAMLESS WORKFLOW EFFICIENT EXAMINATION

Pre-existing examination protocols and imaging conditions can be programmed. Button operations can be reduced significantly to support efficient examinations. Additionally, a reference image can be displayed via the Guide View function.

PROTOCOL ASSISTANT guides you through your examination

Now you can establish standardised scanning protocols for various types of examinations – thus ensuring that all operators are on the same page. Our Protocol Assistant guides you through a series of defined steps, detecting any omissions or potential mistakes. You can even automatically derive the same imaging parameters simply by clicking on a reference image. So why wait? Start increasing efficiency and accuracy today.

Consistent PATIENT MANAGEMENT with automatic measurement reports

Because reporting is such an important and complex aspect of an ultrasound examination, we made sure that all our solutions do it automatically – by transferring all measurement results into a standardized report. With just one click you can easily track and manage your patient's history; share the report in multiple formats on various devices; or import it into third-party reporting platforms.

Improve posture (and productivity) with the COMFORTABLE SOLUTION

Many sonographers suffer from work-related musculoskeletal disorders due to the unnatural posture required for a long day of scanning. Our platforms are designed with the latest ergonomic standards in mind: with large monitors, 360° flexible arms, and adjustable operator panels. You can customise your work environment according to your needs and examination type – thus ensuring a healthy posture with less fatigue and injuries.
